

FLEX BARK SYSTEM

Replications Unlimited's FLEX BARK system is the state-of-the-art in environmental replication of artificial bark and trees. It is the result of utilizing a unique flexible polymer and an innovative production process to create the most realistic artificial tree bark available. Now artificial tree bark can be quickly created with texture and coloring so realistic it can easily fool the best botanist. Replications Unlimited has a library of molds for a wide variety of trees and can produce finished trees or simply supply sheets of tree bark for fabricators and end users to produce their own.

Now museum quality trees can be created for interior and exterior store displays, amusement parks, museums, zoos, hotels, restaurants and any location requiring imitation trees. This is possible because our artificial bark provides the highest level of realism.
